How to use Cloud Storage

Using Cloud Storage as Backup

1. Upload to the cloud

Cloud storage provides an easy and cheap way to backup all your files such as pictures, videos, audios, documents, etc. Consider using cloud storage as a way of making sure you don't lose your files in case of an hardware failure.

2. Keep the content stored locally

Don't delete the files you backup from your computer. Keeping your files stored locally provides an extra layer of security and a way to access them in case you don't have an internet connection.

3. Backup to other physical storage

Despite cloud storage being seen as an alternative to physical storage because it's much cheaper, it can also be used in conjunction with it. For extra security and ease of access, you may want to consider backing up your files to a physical device like an external hard drive.
